

Front-End Development Intern Assignment

Build a Modern Company Landing Page

Objective

Design and develop a fully responsive, modern landing page for a fictional company.

You may choose the company, industry, branding, colors, content and visual style. The goal is to demonstrate your front-end development, UI/UX, responsive design and coding skills.

Suggested Brand

You may use the fictional company **NOVA — AI Productivity Platform**.

Tagline:

Build Better. Work Smarter.

NOVA is an AI-powered productivity platform that helps teams manage projects, automate repetitive tasks and collaborate efficiently.

You are free to create your own brand instead.

Required Sections

Your website must include:

1. Navigation Bar
 2. Hero Section
 3. Trusted By / Company Logos
 4. Features — minimum 6
 5. Product / About Section
 6. How It Works
 7. Statistics
 8. Solutions / Use Cases
 9. Testimonials — minimum 3
 10. Pricing — minimum 3 plans
 11. FAQ — minimum 5 questions
 12. Final CTA
 13. Footer
-

Required Interactions

Implement at least:

- Responsive navigation
- Mobile hamburger menu
- Smooth scrolling
- FAQ accordion
- Button hover effects
- Card hover effects
- Working navigation links

Bonus

You may additionally implement:

- Dark/light mode
- Animated statistics
- Scroll animations
- Testimonial carousel
- Monthly/annual pricing toggle
- Demo modal
- Newsletter validation
- Back-to-top button

Technology

You may use:

- React
- React + Vite
- Next.js
- Vue
- HTML/CSS/JavaScript
- Tailwind CSS
- Bootstrap
- Other modern front-end technologies

React is preferred but not mandatory.

AI / Vibe Coding

AI tools are allowed.

You may use ChatGPT, Claude, Gemini, Cursor, GitHub Copilot, Lovable, Bolt, v0 or other AI-assisted development tools.

However, you must understand the code you submit and be able to explain your implementation.

Responsive Design

The website must work correctly on:

- Desktop
- Laptop
- Tablet
- Mobile

The page should not have horizontal scrolling, overlapping elements or broken layouts.

Code Quality

Your submission should demonstrate:

- Clean and readable code
 - Reusable components
 - Semantic HTML
 - Organized files
 - Meaningful variable/component names
 - Responsive CSS
 - Minimal unnecessary duplication
 - Basic accessibility practices
-

Deliverables

Please submit:

1. Source Code

GitHub repository or ZIP file.

2. Live Demo

Deploy your website using Vercel, Netlify, GitHub Pages, Cloudflare Pages or another hosting service.

3. README

Include:

- Project description
- Technologies used
- Features
- Installation instructions
- Screenshots
- Live demo URL
- AI tools used

4. Short Explanation

Briefly explain:

- Your design decisions
 - Technology choices
 - Component structure
 - Challenges faced
 - How AI tools were used
-

Evaluation

The project will be evaluated on:

- UI/Visual Design — 20
- Responsive Design — 15
- HTML/CSS Quality — 15
- JavaScript/React — 15
- Component Architecture — 10
- Functionality — 10
- Accessibility — 5
- Performance — 5
- Code Organization — 5
- Documentation — 5

Total: 100 marks

Additional bonus marks may be awarded for exceptional interactions, accessibility, performance, animations and overall creativity.

Important

Using AI is allowed, but blindly copying generated code is not acceptable.

During the review, you may be asked to explain your implementation or make changes to the website live.

You should be able to explain:

- How your components work
- How the mobile navigation works
- How the FAQ accordion works
- How data is rendered
- Why you selected your technology
- How you handled responsive design
- How you would improve accessibility
- How you would optimize performance
- How you would convert the static site into a production application

Expected Outcome

The final result should look and feel like a professional modern company website rather than a basic tutorial project.
